EDUCATION

Indian Institute of Information Technology, Bhopal

August 2024 - June 2028

Bachelor of Technology - Computer Science and Engineering (Artificial Intelligence)

Relevant Coursework: Deep Learning, Transformers, GPT Architecture, Generative AI, Agentic AI, RAG, Object-Oriented Programming.

PROFESSIONAL EXPERIENCE

PhotoGPT (TAIC LLC) | Generative AI Intern

March 2026 - June 2026

Generative AI Internship | [Experience & Recommendation Letter](#)

- Worked with 10+ Generative AI platforms for AI image/video generation, prompt engineering, creative automation, and AI-assisted content production.
- Created 300+ AI-generated visual assets, including images, videos, advertisements, thumbnails, product showcases, and social media creatives.
- Supported AI-powered campaigns that collectively generated 10M+ views across Instagram and Threads.
- Optimized prompts and benchmarked newly released AI models to improve output quality, creative consistency, and workflow efficiency.

Podyyssey (Startup), Bhopal

August 2025

Core Member

- Contributed to content creation and community initiatives in a student-led startup, using GenAI tools to improve creative output and productivity.

ACADEMIC PROJECTS

Mistella - AI Workspace | Full-Stack GenAI Project

[Live Demo](#)

Python, FastAPI, LangGraph, LangChain, Groq, Gemini, RAG, FAISS, React/Vite, PostgreSQL/SQLite

- Built Mistella, a full-stack AI workspace unifying LLM-powered chat, conversational memory, multimodal image understanding, document-based RAG, and research capabilities into a single interface.
- Engineered a FastAPI backend with LangChain and LangGraph orchestration for persistent conversation threads, real-time Server-Sent Events (SSE) streaming, and multimodal chat handling.
- Designed a RAG pipeline using PDF parsing, chunking, embedding generation, FAISS vector search, and BM25 retrieval for context-aware, document-grounded question answering.
- Integrated Groq and Google Gemini for high-speed LLM inference and multimodal reasoning; developed REST APIs for chat/streaming, conversation management, image/PDF uploads, document indexing/retrieval, and health monitoring, backed by PostgreSQL/SQLite and deployed the modular React/Vite frontend on Vercel with automated Git-based CI/CD.

ProtoBuy - Agentic AI Commerce Checkout Agent

[GitHub](#)

Python, FastAPI, Groq (GPT-OSS/Llama), Razorpay API, Pydantic, Vercel

- Built ProtoBuy, a conversational commerce agent for Razorpay's AI Buildathon 2026 (Track 1: AI Growth & Agentic Commerce) that discovers products from natural-language requests, builds a cart, and completes real purchases via the Razorpay Orders and Payment Links APIs.
- Enforced a "model proposes, application decides" design: a Groq-powered intent parser suggests actions while deterministic guardrail logic owns spending limits, confirmation flow, and payment execution.
- Designed a bounded-autonomy checkout that auto-approves purchases under a configurable spending limit and requires explicit buyer confirmation above it, with every guardrail check, cart action, and payment outcome logged to a full audit trail.
- Hardened the agent against prompt injection by treating catalog/product text as untrusted data, and built graceful recovery for out-of-stock items, invalid cart actions, and payment failures instead of silent errors.

Voice Companion - Emotionally-Aware AI Companion Backend

[GitHub](#)

Python, FastAPI, LangGraph, PostgreSQL, Redis, Qdrant, Groq (Whisper), Multi-LLM, JWT, Docker

Guided by Prof. Dr. Amit Kumar Nandanawar, IIIT Bhopal

- Engineered a production-grade FastAPI backend for a human-like AI voice companion, orchestrating each conversation turn through a LangGraph pipeline: context building, emotion detection, personality, and relationship modeling before routing to an LLM.
- Built a multi-provider LLM abstraction (OpenAI, Anthropic, Gemini, Groq, DeepSeek, Qwen, OpenRouter) with model routing and fallback, and integrated Groq's Whisper Large V3 Turbo for real-time speech-to-text transcription.
- Designed persistent memory, personality, and relationship engines backed by async PostgreSQL (SQLAlchemy), Redis caching, and a Qdrant vector store, enabling long-term, personalized companion behavior across sessions.
- Secured the API with JWT authentication, scoped permissions, and per-session ownership checks; containerized the service with Docker and validated it with 700+ automated tests (702 passing).

ACHIEVEMENTS

- Designed the official logo for IIIT Bhopal Alumni Reconnect Cell, strengthening the college's alumni engagement and visual identity.
- Built a web-based app demo as part of a team at Hack-O-Sprint, IIIT Bhopal Internal Hackathon, showcasing practical problem-solving and web development skills.
- Led and managed campus-wide events as a member of Axios, IIIT Bhopal, coordinating logistics and on-ground execution for gatherings of 2000+ students and strengthening leadership and event-management skills.

SKILLS

Programming Languages: Python, C/C++, HTML/CSS.

Backend & APIs: FastAPI, REST APIs, JWT Authentication, LangGraph, LangChain, Docker.

AI Platforms & APIs: Groq, OpenAI, Anthropic, Google Gemini, Hugging Face Transformers, Razorpay API.

Development Tools: Git, GitHub, VS Code, Jupyter Notebook, ChatGPT, Claude, Gemini, Perplexity, Grok, ComfyUI.

Frameworks and Libraries: PyTorch, scikit-learn, LangChain, LangGraph, Advanced RAG, Pandas, NumPy, Matplotlib, Seaborn.

Databases: PostgreSQL, Redis, SQL (basic), FAISS/Qdrant (vector stores for RAG & memory).

Operating Systems: Linux (Ubuntu), Windows.

Relevant Coursework: DSA, OOPs, DBMS, OS, Computer Networks.

Soft Skills: Problem-Solving, Creativity, Teamwork, Communication, Adaptability, Time Management.
